Tenure KYC Matrix

Tenure Group	Tier 0 (Unverified)	Tier 1 (Phone Verified)	Tier 2 (ID Verified)	Tier 3 (Address + Income Verified)
1-2yr	49.73%	51.08%	51.09%	52.30%
0-90d (new)	54.30%	51.27%	47.43%	50.99%
4+yr	50.04%	48.89%	52.21%	49.31%
91-365d	51.58%	49.24%	48.78%	50.00%
2-3yr	49.57%	49.36%	50.85%	49.65%
3-4yr	50.33%	48.97%	49.54%	49.68%

Country x Channel Heatmap

channel_type	Ghana	Kenya	Nigeria	South Africa
USSD	50.62%	52.79%	51.70%	48.24%
POS	51.69%	50.93%	50.30%	50.06%
Mobile App	53.47%	50.92%	49.95%	47.60%
API/Third-Party	51.76%	49.33%	49.19%	50.27%
Agent	48.96%	47.74%	49.78%	50.06%

Recommendations & Verifications

What does the data actually support?

0 of 6

*Hypothesised patterns
statistically confirmed*

Claim	Actual Result	Statistic	P Value	Verdict
New accounts (<90d) show 3x higher fraud rate	51.2% vs 49.9% (oldest)	trend test	0.65	Not confirmed
Nigeria + Kenya drive 70% of fraud volume	Each country ~25% of volume	$\chi^2=2.31$	0.51	Not confirmed
High velocity score correlates with fraud/reversal	$r \sim 0.00$ both	correlation	n/a	Not confirmed
Market traders have highest dispute rate	Ranked 10th of 15 segments	$\chi^2=23.24$	0.06	Not confirmed
USSD shows 2.3x higher fraud rate than app	USSD 51.2% vs App 50.3%	$\chi^2=7.06$	0.13	Not confirmed
Month-end spikes in cash-out/reversal	Within sampling noise	$\chi^2=2.13$	0.14	Not confirmed

Immediate actions

Don't build risk rules from this data · treat as a schema fixture · investigate the uniform 50% flag rate

Known data issues

week_number was null, now fixed · fraud_loss_usd/is_fraud_flagged correlation is mechanical, not predictive

If real data arrives

Prioritize channel, new-account, velocity, and geographic risk testing
